

CALL FOR PARENTS!!

For our study on Gender Differences in Attention and Activity

A team of researchers at the **University of King's College London** are researching to understand gender differences in attention and activity and if these predict behaviour and performance outcomes in secondary school. Specifically, we are keen to understand **why attention and activity difficulties in girls become more apparent in adolescence.**

If you participate in Part 2 of the study:

YOU WILL GET £10

YOUR CHILD WILL GET £5

What will happen if you and your child participate?

- 1 Your child will complete 4 short questionnaires in school.
- 2 Your child will complete two computer tasks in school that measure activity and attention (only some children will get selected for this part)
- 3 You will complete a short online questionnaire about your child (if your child is selected for part 2)
- 4 We will contact you again in 12 months and ask your child to complete two more questionnaires.

If you wish to participate or if you want more information about the study **point your phone camera at the QR code** and tap the banner that appears on your phone. Or click on the link in your email
